Efficient and ergonomic
material handling

Item No.: 89-12130

Combi-gripper for metal bars 89-12130

Type of lifting object	Metal
Weight (kg)	25
Maximum capacity (kg)	23
Industry	Metal industry
Serial number	A6753
Gripping technique	Combi
Optional control	PSH
Noise Level (dB)	60

This is our Combi-Gripper for Metal Bars that also has a hook. It is designed to lift different types of metal bars and metal profiles. It is a mechanical gripper that lift the bars by clamping onto them. The gripper can also tilt the bar up to 45°. The maximum lifting capacity for this tool is 23 kg. This combi-gripper also comes with an added hook for lifting other things. In the picture, you'll see it being used to lift a gas cylinder. You can lift other things with the hook as well, for example jugs, buckets or other types of containers with a handle.

Lift with a hook or clamping mechanism

The 'combi' in combi-gripper stands for "combination". This means that there are more ways than one to use the tool. The Combi-Gripper for Metal Bars has two metal plates that grip the bar and clamp onto it for safety. The bar can then be lifted and maneuvered effortlessly. One of the buttons on the machine is for tilting the load slightly. To let go of the bar, push the red 'release' button and the lifting tool will disengage.

For lifting other things such as gas containers or buckets, just use the hook. Place the hook onto the handle of the load and let the lifting tool do the rest. The only thing you need to do is move the gripper to the drop-off point.

Customized combi-grippers for your needs

If you need to lift different types of loads in one area and only want one machine, the combi-gripper could be what you need. If you need to lift similar types of objects in different sizes or materials, we can design the perfect Combi-Gripper for you. We customize all our lifting tools to make it optimal for you.
