

LIFT WITH EASE

Efficient and ergonomic
material handling

Item No.: 89-12356

Gripper for gas cylinders 89-12356

Weight (kg)	22.5
Maximum capacity (kg)	100
Gripping technique	Vacuum
Optional control	PSH
Type of lifting object	Gas cylinder
Noise Level (dB)	70

Lifts All's lifting gas cylinder lifter effortlessly lifts up to 220 lbs / 100 kg. With the assistance of our gas cylinder lifting tool, businesses within the oil, gas or other industries can streamline their material handling processes and make the work more ergonomic for those handling gas cylinders.

Gripper for gas cylinders - safe, energy-efficient and precise handling

This lifting solution for gas cylinders is developed for safe and ergonomic handling in demanding industrial environments. With intelligent vacuum technology and several built-in safety functions, it gives the operator full control while minimizing the risk of accidents

Our gas cylinder lifting tool is equipped with several safety features:

- The gripper runs on compressed air instead of electricity. There are no ignition sources in the gripper, which means this device doesn't require ATEX certification. If necessary, a Lifts All 'Declaration of exemption' can be provided upon request.
- Handling gas cylinders is very sensitive work. They should not be exposed to shocks or impacts. The gas cylinder gripper is designed to handle the load gently and securely, and includes a load guard that ensures a slow descent of the load if the pressure drops in the system.
- The gripper uses vacuum suction cups for gripping instead of mechanical clamps. As a result, the cylinders remain undamaged, free from scratches and marks.

User-friendly design

The lifting tool is very user-friendly, with intuitive controls and a clear user manual. This allows the operator to quickly learn how to use the tool, which shortens the training period and increases productivity.

Using a gas cylinder lifter offers many advantages, including increased safety, higher efficiency, and fewer workplace injuries. By relieving the operator of heavy manual lifting, the lifting aid reduces the risk of strain injuries in, for example, the lower back, shoulders, and elbows. In addition, gas cylinder lifts streamline the work, which increases productivity and reduces the time spent handling gas cylinders.
