

LIFT WITH EASE

Efficient and ergonomic
material handling

Item No.: 89-12264

Lifting tool for ring gears 89-12264

Type of lifting object	Metal
Industry	Metal industry
Maximum capacity (kg)	8
Serial number	89-12264
Optional control	Balancing
Gripping technique	Mechanical
Noise Level (dB)	60

Our lifting tool for ring gears is an effective tool for fast material handling. Lifting ring gears that weigh several kilos is done in a minute, thanks to the balancing control system that makes the whole gripper and the load feel weightless. This means that you can move them regardless of your physical strenght.

The lifting tool grips the load automatically. The only thing you need to do is use the control unit to release the load. There are no buttons for maneuvering the tool up or down- you are the one guiding it. Because of its simplicity it is very popular and easy to use.

Lifting Tool for Ring Gears- Optimal for fast and frequent lifting

This lifting tool is perfect for working environments with many quick lifts, where the job needs to be done fast and effective. For example, it can be used in a production line, beside a conveyor or in the packing process. As well as being fast at material handling, the balancing function also provides optimal flexibility and precision. The load is placed exactly where it needs to be. The gripper helps move a ring gear from the material stand to a mounting fixture for mounting. The ring gear is then moved further on to a pallet track. The whole lifting process is quick, easy and weightless.

For gripper with a balancing control-system, all the loads need to be of the same weight. If you instead lift different ring gear, cog wheels, sun wheels or other objects, we at Lifts All can always customize a gripper that will be optimal for your needs.
