

LIFT WITH EASE

Efficient and ergonomic
material handling

Gripper for flywheels 89-12603

Weight (kg)	10
Noise Level (dB)	45
Maximum capacity (kg)	80
Optional control	PSH
Type of lifting object	Automotive component, Metal
Serial number	A7801
Gripping technique	Mechanical

Mechanical gripper for flywheels

The mechanical flywheel gripper is designed for the safe and ergonomic handling of flywheels, balance wheels, and other rotating discs in the automotive and manufacturing industries. The gripper securely grips the component's holes, ensuring a stable lift without damaging the part.

The lifting is powered by a pneumatic cylinder that provides fast, smooth, and controlled movement throughout the entire lifting process. The robust gripper makes it easy to lift, move, and position the component with high precision, while reducing the physical strain on the operator and improving the work environment.

Durable gripper

The gripper is made of stainless steel for durability and a long service life in demanding production environments. With a maximum lifting capacity of 80 kg, the gripper is a reliable solution for ergonomic material handling in assembly lines and production flows.

Like all of Lifts All's lifting solutions, the mechanical gripper can be customized to suit the component's design, weight, and production process. The result is a safe, efficient, and reliable handling solution that contributes to increased productivity and a better work environment.

Advantages

- Grips securely in the center hole of flywheels, balance wheels, and rotating discs

- Safe handling without damaging the component
- Pneumatic operation with a pneumatic cylinder
- Gripper made of stainless steel
- Lifting capacity up to 80 kg
- Ergonomic and precise positioning
- Customized to the customer's component and production process
