material handling

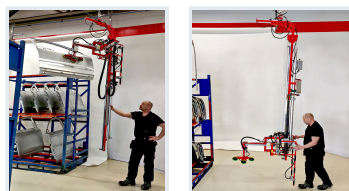

Item No.: 89-12025

Manhattan car door gripper 89-12025

Type of lifting object	Car component
Weight (kg)	138
Maximum capacity (kg)	30
Industry	Automotive industry
Serial number	A-6558
Function	Tilt
Gripping technique	Manhattan - Lift high, Vacuum
Optional control	PSH
Noise Level (dB)	65

The Manhattan Car Door Gripper is specially made to lift and tilt car doors. This car door gripper makes it easy to transfer doors from a rack to a cart, or vice versa. A car door weighs about 20 kg and lifting it manually can be quite tricky and heavy work, especially if it needs to be done several times a day. The weight is normally too much for one person to carry. The Manhattan Car Door Gripper makes lifting car doors an easy, one-man job. The gripper can also reach higher up, to grip doors located on the top racks that would normally be out of reach without a ladder.

Manhattan car door lift – how does it work?

The Manhattan car door gripper uses vacuum cups to lift the doors, making them feel weightless during the lift. The tool makes it easy to move car doors up and down from the racks. The vacuum cups attach securely to the outside of the car door; the operator presses the buttons to maneuver and lift the door, and the lift balances the car door out of the racks. The operator then moves the door to the cart. The lifting tool also has a tilt function that allows the doors to be tilted slightly. The vacuum cups are rotatable, making it possible to lift both right- and left-hand doors. The tool is efficient, and only one person is needed to get the job done.

The work of manually lifting car doors can be tough on the body because of the weight of the doors and how the body rotates when lifting heavy objects. The Manhattan Car Door Gripper makes the job easier and is ergonomically better for the operator. It also saves time because lifting with this gripper is faster, more efficient, and safer than manual lifting.
