Industry	Wood and furniture industry
Serial number	A6714
Gripping technique	Manhattan - Lift High, Mechanical
Optional control	PSH
Noise Level (dB)	53

Manhattan Cabinet Lift – custom-designed for safe cabinet handling

The Manhattan Cabinet Gripper is a specially designed lifting tool for handling cabinets and cabinet frames. With this gripper, you can easily and safely move cabinets from one pallet to another or onto a conveyor belt. The tool is fully mechanical and equipped with adjustable forks, making it possible to lift cabinets of various sizes.

One key custom feature is the padded forks, which protect the load throughout the entire lifting process. This allows both unpainted and painted cabinet frames to be handled without risk of damage. As a variant, the lift also allows handling at greater heights than is possible with manual lifting. The maximum load is 150 kg.

How the Manhattan cabinet lift works

The Manhattan cabinet lift is a mechanical lift with adjustable forks. The operator manually adjusts the distance between the forks to match the size of the cabinet. The lift is also equipped with a center-of-gravity adjustment feature, which ensures a stable and safe lift without swaying.

Once the cabinet is lifted, you can easily move the load to the desired location. Then press the release button, and the forks will retract from the cabinet. This allows you to handle loads of up to 150 kg ergonomically and safely, without straining your back or shoulders.

Tailored to your needs

Just like all our lifting equipment, we customize the Manhattan cabinet lift to meet your specific needs. Whether you require different cabinet sizes, a different load type, or maximum capacity adjusted maximum capacity, we design the lift to be the best fit for your business.
